Summary

Motivated Artificial Intelligence student with hands-on experience in **Python, machine learning, and data analytics pipelines**. Experienced in building **interactive AI-driven applications, dashboards, and ML systems** using Python, SQL, and cloud infrastructure. Strong interest in **Generative AI, AI agents, and applying AI technologies to real-world industrial and business problems**. Eager to contribute to AI-driven digital transformation initiatives.

Education

B.Sc. in Artificial Intelligence,

09/2024 – Present | Deggendorf, Germany

Deggendorf Institute of Technology

Core modules: Programming, Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Databases, Internet Technologies, Computer Vision, and Project Management

Work Experience

Working Student AI Monitoring & IT Infrastructure,

05/2026 – Present | Munich, Germany

Siemens AG

- Building and managing **AI agent workflows** in **ServiceNow**, designing **automation pipelines** that simplify and accelerate IT personnel workflows across **incident management**
- Developing an **LLM-powered** server management **chatbot** enabling **natural language** interaction with IT systems for incident handling, system queries, and operational guidance
- Analyzing incident data to identify **recurring patterns and anomalies**, using **Python** and **open-source monitoring tools** to automate resolution workflows and reduce response times

Projects

StudyCard AI 📄, *Python, FastAPI, React, LangChain, Google Gemini API, PyPDF2, Prompt Engineering*

- Built an AI-powered full-stack app converting uploaded PDFs into interactive flashcards using **LangChain** and **Google Gemini API**, with two study modes — detailed answers and one-word flashwords.
- Designed **prompt engineering** pipelines to generate structured question-answer pairs from PDF content, with a dedicated quiz mode that uses AI to generate plausible wrong answer options for multiple choice questions.
- Built a **React** frontend with card flip animations, shuffle, and an AI-powered quiz mode with real-time scoring, paired with a **FastAPI** backend handling PDF extraction and Gemini API calls.

Crypto Chatbot 📄, *Node.js, Express.js, React.js, Socket.IO, CoinGecko API*

- Built and deployed a full-stack, real-time chatbot using **React.js, Node.js, and Express.js** to track cryptocurrency prices via the CoinGecko API.

- Implemented **Socket.IO** for real-time, bi-directional data streaming, achieving a **90% reduction** in data latency and providing a live user experience.
- Managed the end-to-end development lifecycle, from system design to cloud deployment on **Azure Virtual Machines**, resulting in **100% service uptime** during testing.

Amazon Stock Return Prediction System [↗](#), Python, Scikit-learn, Pandas, Time Series Analysis

- Designed and implemented a **leakage-free time-series ML pipeline** for Amazon (AMZN) stock analysis using 12 engineered technical indicators, achieving **~54% directional accuracy**, aligned with academic benchmarks.
- Built and evaluated **classification (next-day UP/DOWN)** and **regression (1-day and 5-day returns)** models, comparing **real vs augmented (synthetic) data** to analyze robustness, overfitting, and model stability.
- Developed an **interactive Streamlit application with a voice-enabled chatbot**, supporting date-based price queries, explainable predictions, feature insights, and **on-demand text-to-speech responses** for non-technical users.

Library Organizer with OCR [↗](#), Python, Tkinter, PyOCR, PIL, Tesseract, Unit-test, GUI development

- Designed a desktop application to automate **book data entry** via **OCR**, reducing manual input by **90%**.
- Built a modular, scalable architecture capable of managing **1M+ records** efficiently.
- Implemented **unit and integration tests** using **unittest** and **unittest.mock** to validate OCR accuracy, database operations, and GUI functionality.

MovieLens Data Analytics [↗](#), Python, SQLite, Pandas, Power BI

- Built an end-to-end **data pipeline** transforming over **100K MovieLens records** into a relational **SQLite database** for structured querying and analysis.
- Applied **Pandas** for data cleaning and integrity validation, ensuring **100% consistency** across movie, rating, and tag datasets.
- Created interactive **Power BI dashboards** to visualize top-rated movies, genre trends, and rating distributions, improving analytical insight by **80%**

Skills

Languages & Frameworks

Python, Java, JavaScript, HTML

Data & Systems

SQL, NoSQL, WebSockets, Linux, Power BI, Git/GitHub, Postman

Deployment

Azure Virtual Machines, Azure App Services, CI/CD, Github Action

Artificial Intelligence

Machine Learning, Generative AI workflows, Prompt Engineering, Langchain.

Certificates

The Complete Python Developer — Udemy (Instructor: Andrei Neagoie) Completed: June 25, 2025

Languages

English

C1 - Advanced Proficiency

German

B1- (currently enrolled)
